

Idle Hands are the **Developer's Workshop**

With little more than a few key strokes and restarts, a suite of essential developer productivity software such as WSL, Github, VSCode, Docker Desktop, Python and more will be installed giving you a sandboxed virtual environment on your Windows 10+ machine in a matter of minutes. Included is a tool called the Devel's Playground that lets you choose from thousands of highly customizable Docker images straight from the Docker Hub. It will automatically install a lightweight image for you to try at the end of the install. These custom images ([described further down here](#)) were built with the Docker files hosted on this repo and are easily customizable for yourself

Easy as 1, 2, 4

1. Copy/pasta the line of code below into a terminal ([CMD or Powershell](#))
2. Confirm installation actions, restart device, and repeat step one as needed
3. ??
4. Profit

```
powershell.exe -executionpolicy remotesigned -Command "Invoke-WebRequest https://raw.githubusercontent.com/kindtek/powerhell-remote/devels-workshop/download-everything-and-install.ps1 -OutFile install-kindtek-devels-workshop.ps1; powershell.exe -executionpolicy remotesigned -File install-kindtek-devels-workshop.ps1"
```

When set up is complete, there will be an option to launch the Devel's Playground WSL Docker import tool. Not only does it make it easy for you to import your own custom Docker images onto WSL, it demonstrates how easy it is to wrap this portable containerized developer environment around a separate standalone repo

Instructions for importing images from hub.docker.com into WSL are [found here](#)
